

Submission Guidelines

Your submission for this practical will be made through Canvas by submitting the URL (link) to your GitHub or GitLab repository.

Before submitting your work, make sure you complete all of the following:

1. Create a GitHub or GitLab repository for your Android Studio project.
2. Set the repository's access/visibility level to `Public`
 - Your repository must be publicly accessible so that it can be accessed using the URL you submit on Canvas.
 - Do not make the repository `Private`.
3. Make sure your completed Android Studio project has been pushed to the repository.
4. Make sure the repository contains your work for:
 - Part 1: `LinearLayout` with weights
 - Part 2: `ConstraintLayout` with Weights
 - Part 3: GitHub/GitLab version control
5. Check that the repository URL works and that the repository can be accessed without requesting permission.
6. Copy the URL of your public GitHub/GitLab repository.
7. Submit the repository URL through Canvas.

Important

The GitHub/GitLab repository URL that you submit on Canvas is your practical submission. You do not need to upload the Android Studio project separately to Canvas, unless otherwise instructed.

The submitted repository will be used to access and assess your practical work. Therefore, make sure that:

- the repository URL is correct;
- the repository is set to `Public`;
- your completed project has been pushed to the repository;
- all required files are present; and
- the repository can be accessed using the submitted URL.

If your repository is `Private`, the practical may not be accessible for assessment.
